

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

smile, we may at least believe that they looked forward to the things they could not accomplish but which you shall accomplish.

SCIENTIFIC EVENTS

THE JAMES WATT CENTENARY COMMEMORATION AT BIRMINGHAM¹

THE arrangements for the James Watt centenary commemoration are now practically complete, the general scheme being set forth in a pamphlet issued by the Centenary Committee. The form which the memorial is to take is threefold: (1) To endow a professorship of engineering, to be known as the James Watt chair, at the University of Birmingham, for the promotion of research in the fundamental principles underlying the production of power, and the study of the conservation of the natural sources of energy; (2) to erect a James Watt memorial building to serve as a museum for collecting together examples of the work of James Watt and his contemporaries, Boulton and Murdock, as a meeting place and library for scientific and technical societies, and as a center from which engineers could cooperate in spreading scientific knowledge; and (3) to publish a memorial volume.

The success of the memorial will depend upon the response to the appeal for funds, and we are glad to note that assurances of support have come not only from all parts of the British Isles, but also from France and America. As indicated in our issue of May 15, we attach special importance to the foundation of the James Watt chair of engineering, and we can imagine no better memorial to the great engineer than the creation of a school of research so endowed as to attract both a professor of exceptional ability and also the most brilliant students, of whatever class. Such a scheme would require an endowment on a scale altogether greater than that which is usually associated with chairs in universities, but it should be possible to raise the necessary money—especially with the sympathetic help of America, which of recent years has shown not only a ready appreciation of the value of scientific research, but also a

generosity in its endowment which has been more admired than imitated in this country. It must always be remembered that the vital factor in research is the *man*, and every possible inducement should be offered to secure the best men, both as directors and students.

The commemoration ceremonies are to extend over the three days, September 16–18, and the official program includes a garden-party at Watt's house (where his workshop can be seen in the state in which he left it in 1819), and visits to Soho Foundry and two of his engines (one of which, the first pumping engine built for sale by Boulton and Watt in 1776, will be seen at work). A degree congregation is to be held by the university at which honorary degrees will be conferred on distinguished engineers and men of science.

The committee has issued a short pamphlet (by Professor F. W. Burstall) in which an appreciation is given of the salient facts in the life of Watt, and of his epoch-making association with his colleagues Boulton and Murdock.

MEETING OF THE SUBCOMMITTEE ON PATHOMETRY OF THE INFLUENZA EPIDEMIC OF THE PUBLIC HEALTH ASSOCIATION

THE Section on Vital Statistics of the American Public Health Association at the Annual Meeting in Chicago in December, 1918, reorganized the Special Committee on Statistical Study of the Influenza Epidemic with three subcommittees on Registration and Tabulation Practice of the Federal Departments (Subcommittee A), the State Departments and Commissions (Subcommittee B) Municipal Boards of Health and of other local Public Health Agencies (Subcommittee C) and a fourth subcommittee (D) on Pathometry or Mathematical Analysis and Interpretation of the Epidemic.

Subcommittee A, B, C have met at various times and will have data ready for the consideration of subcommittee D at a meeting called for 9:30 A.M., September 19, at Columbia University. Sessions will follow in the afternoon and on Saturday the twentieth.

The discussions at the preliminary meetings
